

Chemistry of the Lower Atmosphere

Filesize: 4.91 MB

Reviews

It is not difficult in go through easier to understand. It normally fails to price too much. I am very happy to inform you that this is actually the greatest ebook i actually have read through within my personal lifestyle and can be he best publication for ever.

(Miss Ebony Brakus IV)

CHEMISTRY OF THE LOWER ATMOSPHERE

Springer. Paperback. Book Condition: New. Paperback. 352 pages. Dimensions: 9.0in. x 6.0in. x 0.8in. About three years ago Catherine de Berg and I published a short article in Nature in which we attempted to explain why the chemistry of the atmosphere of the Earth is today so completely different from that of our two neighboring planets, Mars and Venus. Our atmosphere is composed mainly of N_2 and O_2 with traces of Ar , H_2O , CO_2 , etc., while the atmospheres of both Mars and Venus are almost entirely made up of CO_2 . Also, the Earth appears to be the only one of the three planets which has oceans of liquid water on the surface. Since the presence of liquid water on Earth is probably an essential requirement for life to have originated and evolved to its present state, the question of the apparent absence of liquid water on Mars and Venus suddenly acquires significant proportions. In our paper in Nature, and later in a more detailed discussion of the subject (Planetary Atmospheres, in Exobiology, edited by C. Ponnamperna, North Holland Publishing Co.), we tried to describe why we believe that in the early history of the solar system all the terrestrial planets lost the atmospheres of H_2 and He which they had acquired from the solar nebula at the time of their formation. These planets, completely devoid of atmospheres, like the Moon today, started accumulating new gases which were exhaled from the interior by the commencement of volcanic activity. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
