RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2007 OCLC Number: (OCoLC)191221870 Subject: Air -- Pollution -- Measurement. Excerpt: . . . The total emission factors (combustion plus precombustion) per delivered kWh of electricity for major pollutants in the continental United States and each major grid are shown in Tables 3 and 4. The separate emission factors from combustion and precombustion effects for electricity generation are shown in Tables B-3 through B-6 in IP and SI units. The precombustion emissions account for about 5 of the CO and 10 of the CO emissions. The precombustion emissions of CH are approximately two orders 2 2e 4 of magnitude greater than the combustion emissions because of the high amount of CH released when 4 coal is mined and processed. The PM factors are for direct emissions and do not include the effect of particulate formation in the atmosphere from chemical reactions of sunlight with emissions of NO, SO, organic compounds, and X X other gases. The PM composition and emission levels are complex functions of boiler firing configuration, boiler operation, pollution control equipment, and fuel...
